CALIBRATION MIRACLEAN® 2000 GAS GRIDDLE

THERMOSTAT CALIBRATION

Calibration is not covered under warranty.

Tools: Accurate surface thermometer
Standard screwdriver

1. Turn on the griddle with thermostat set at 300°F. Allow burners to cycle on and off three times. (Approximately 10 minutes.)
2. Place thermometer on surface over thermostat bulb. Use the inverted “V” on the front of the griddle plate to locate thermostat bulb. Place the surface thermometer about half way toward the back of the plate.
3. When burners cycle off, the griddle is up to temperature. If temperature is within 15°F of thermostat setting, remove knob. Loosen two screws in the thermostat dial plate. Replace knob. Reset the dial plate to match the thermometer reading.

Thermostat calibration
Thermostat knob removed to reveal calibration screws.

5. Remove the knob to tighten screws on dial plate and replace the knob.

For calibration over a 15°F difference, contact a qualified service company.
